SOS and Course Completion

eCore analyzes the course completion outcome by comparing total student enrollment, students reported at-risk, and students who choose to withdraw from a course. There are four areas of course completion outcome that are part of the Save Our Students (SOS) work initiative:

- Students reported at-risk
  - Completed Course
  - Did not Complete Course
- Student not reported at-risk
  - Completed Course
  - Did not Complete Course

For FY 2013, just under 30% of the full enrollment was reported at-risk. Additionally, 79% of those reported at risk by their professors, with subsequent eCore student success team follow-up, went on to complete the course.
